

## Proscenium Curatin Tracks

A proscenium track should be long enough to allow the curtains to clear the opening when in the "off" position. For proscenium openings up to 6m wide the track should be 1m longer than measurement X below (proscenium opening).

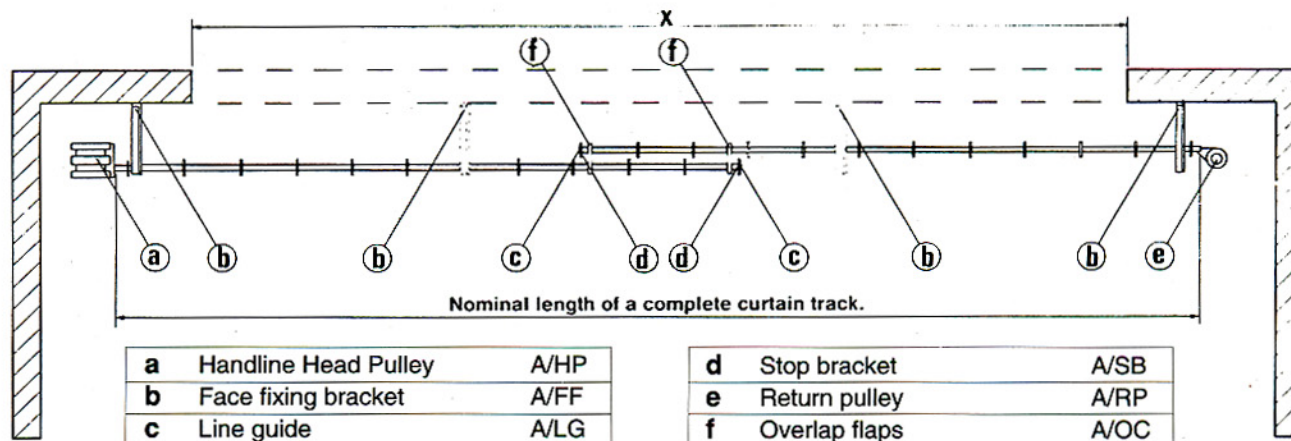

For openings between 1m and 9m track should be 1.5m longer.

For openings between 9.1m and 12m track should be 2m longer.

For openings between 12.1m and 15m track should be 2.5m longer.

For openings between 15.1m and 18m track should be 3m longer.

The figures given above apply to T-400, T-60 and T-70 Curtain Tracks.

When a curtain track is operated by an electric controller a further 300mm should be added to the length to give a 150mm safety margin for over-run.
