T400 Track Details

The compact T400 Curtain Track System has been designed as a light duty track, most suitable for use with smaller stages and large windows.

Other areas in which this curtain track system has proved its versatility are in small television and video studio cycloramas, especially where chromakey double tracks are required in a restricted area, school drama, auditorium windows and also crematoria curtains.

The method of working the Compact T400 Curtain Track may be either electric controller, handwinch, handline or walkalong methods.

Manufactured from steel and electrically welded, this track is available in a standard range of straight and curved track sections from which it is possible to construct an infinite range of track configurations, all joints being interchangeable. Slides for the Compact T400 Track have a maximum loading capability of 1.70 kilos and these should be spaced at 200mm intervals along the curtain head length of track.

The recommended maximum length of track in normal use is 10 metres, this figure applies to both single and overlapped tracks.
